oVRcome®

Build confidence with VR

A new way to experience exposure therapy

oVRcome brings immersive virtual reality experiences into your sessions with your clinician.

With your clinician's guidance, you can practice in realistic environments designed around the situations you're working towards - in the clinic, or remotely at home.

How it works

01. Your clinician creates your program

Your clinician selects experiences from the oVRcome VR library and creates an exposure plan based on your needs.

02. Get set up with oVRcome

You'll receive information from your clinician about how to access your program and get started.

03. Download the app

Download the oVRcome app from the App Store or Google Play, or scan the QR code below.

04. Log in and get started

Log in using the email address registered by your clinician and access your VR experiences.

Ways to use oVRcome

In clinic: Use a Meta Quest or Pico headset provided by your clinician or clinic.

At home: Practice between sessions with your smartphone and compatible VR headset.

Live sessions: Your clinician can guide you through VR and see what you see.

At-home VR setup

For home practice, you'll use your smartphone with a compatible VR headset.

Your headset will need to be arranged with your clinician or clinic. Depending on what they offer, you may:

- Receive a headset from your clinician or clinic
- Use your own compatible smartphone VR headset
- Purchase an oVRcome headset for US$29 + shipping
  Free shipping is available in the US.

Your clinician or clinic will let you know what option is available to you and how to arrange your headset.

Have questions about your headset?

Speak with your clinician or clinic about which headset you'll use and how to arrange one for home practice.
